Theory, Algorithms, and Applications to Energy Networks and Energy Systems

Energy networks and energy systems are critical to the functioning of modern society. They provide us with the electricity, heat, and transportation we need to power our homes, businesses, and industries.

Bilevel Programming Problems: Theory, Algorithms and Applications to Energy Networks (Energy Systems)

The efficient and reliable operation of energy networks and energy systems is essential for economic growth and environmental sustainability. In recent years, there has been a growing interest in the development of new methods and algorithms to improve the operation of these systems.

Theory, Algorithms, and Applications to Energy Networks and Energy Systems is a comprehensive guide to the latest research and

developments in this field. The book covers a wide range of topics, including:

- Energy network modeling
- Energy optimization
- Energy control
- Energy system planning
- Energy system operation
- Energy economics
- Energy policy

The book is written by a team of leading experts in the field, and it provides a comprehensive overview of the latest research and developments. The book is also a valuable resource for practitioners who are involved in the operation of energy networks and energy systems.

Table of Contents

-
- Energy Network Modeling
    - Power flow modeling
    - Gas flow modeling
    - Heat flow modeling
- Energy Optimization
    - Linear programming

- - Nonlinear programming
  - Dynamic programming
- Energy Control
  - Feedback control
  - Optimal control
  - Robust control
- Energy System Planning
  - Generation planning
  - Transmission planning
  - Distribution planning
- Energy System Operation
  - Day-ahead scheduling
  - Real-time dispatch
  - Unit commitment
- Energy Economics
  - Electricity markets
  - Gas markets
  - Heat markets
- Energy Policy

- Climate change policy

- Energy efficiency policy

- Renewable energy policy

Theory, Algorithms, and Applications to Energy Networks and Energy Systems is a comprehensive and up-to-date guide to the latest research and developments in this field. The book is a valuable resource for both researchers and practitioners who are involved in the operation of energy networks and energy systems.
